## Orange Business Services partners with MobileIron to further support MNCs in mobility management

updated Device Management Premium focuses on BYOD, security and application management, in line with Orange Business Services' ambition to support MNCs in managing their global mobility services

[Orange Business Services](#) and [MobileIron](#), a leader in security and management for mobile apps, documents and devices, are partnering to launch a new version of Device Management Premium managed service. Device Management Premium, a smartphone and tablet management system for fleets of more than 300 devices, uses MobileIron's technologies and is available on a worldwide basis.

The partnership with MobileIron takes the existing offer beyond traditional mobile fleet management functions – user profile and device management, security policy application, configuration of embedded apps, mobile personalization – to offer an advanced, highly secure version of the solution. Available in either a private or cloud mode, this version features:

- **application management:** To address bring your own device (BYOD), fleet managers can create a secure barrier between personal and professional applications and data. Each business application will communicate with the company's server via a distinct and secure tunnel, and the application data stored on the device will be automatically encrypted. Administrators can also limit access to certain corporate applications from personal devices.
- **content management:** Employees can view and save the documents they need to work on the go using their tablet or smartphone. Access to certain resources can be restricted or limited to read-only based on users' profiles and data sensitivity. The documents saved will be stored in an isolated container which the administrator can remotely delete if the device is lost or stolen.

“A mobile deployment used to mean the company issued 200 smartphones to executives,” said Bob Tinker, CEO, MobileIron. “Now, it means that every employee in a Global 2000 company is using mobile apps and accessing corporate content via a mobile device that may or may not be owned by the company. Enterprise mobility is complex and our partnership with Orange Business Services brings together the top technology and services that MNCs need to be able to make mobile a primary computing platform.”

Already available in a cloud-mode, Device Management Premium will be available in an integrated version for companies that want to host it on their own infrastructures. Device

# MobileIron®

Management Premium is an agnostic solution which works with all fleet and network operators via WiFi and mobile network. Device Management Premium helps companies control costs by enabling policies to minimize roaming and data usage charges and by being billed per device, per month.

## **Beyond device management, Orange Business Services provides full set of mobility solutions and services to help companies manage mobility globally**

As a leading international operator, Orange Business Services offers MNCs global connectivity in 32 countries served by Orange and extending to 82 countries served by the Freemove alliance. Additionally, Orange Business Services offers the following [mobility](#) solutions and services:

- **mobile cost control** – Orange Business Services helps companies anticipate and manage costs – a highly critical issue in an international environment – through its Orange Telecom Expense Management solution and by leveraging the global WiFi network and also developing the right end-user segmentation;
- **consulting on BYOD and security** – Employing specific mobile security services as well as Orange consulting services, Orange Business Services advises customers on BYOD best practices;
- **mobile workspace** – Ready-to-use devices with customer business applications and Orange collaboration tools are fully supported by Orange Business Services.

“Beyond connectivity, Orange Business Services is leveraging its managed IT service expertise and customer care excellence to support MNCs in the fast-changing mobile environment reshaped by the global tablet revolution and the BYOD phenomenon,” said Thierry Bonhomme, CEO, Orange Business Services. “As a trusted advisor, we can manage the network, devices, applications and usage on a global scale and enable global enterprises to take full advantage of their mobility journey.”
